

SCORPION AUTOMOTIVE
X-SERIES
CAN Bus Immobiliser

X-Series is an invisible and undetectable CAN Bus Immobiliser that offers protection from modern vehicle theft techniques, such as key relay attacks. The latest technology is used to give vehicles the highest level of security, automatically activating as soon as the ignition is turned off. The X-Series also provides protection against key cloning attacks as a unique PIN code is required, which is created via the vehicle's buttons or dash, and is also needed to disarm the immobiliser for the ignition to start again.

IGNITION OFF

The immobiliser instantly starts protecting your vehicle against theft the moment your vehicle's ignition has been turned off, without requiring anything.

PREVENT THEFT

If someone gets a hold of vehicle keys or attempts a key relay attack, the vehicle cannot be moved without the correct PIN.

ENTER CUSTOM PIN

Enter your unique custom PIN via the dash or steering wheel buttons to disarm the immobiliser and drive off in the vehicle as normal.

KEY RELAY DEFENCE

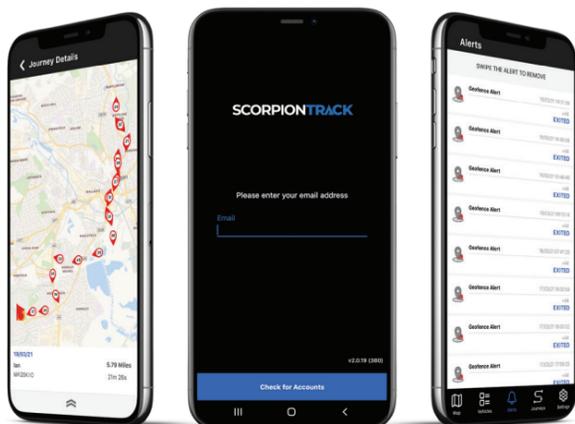

Key Relay theft is a method of vehicle theft where a criminal picks up the signal from your car key and uses a transmitter to trick your car into believing the key is present, allowing the thief to open the car and start it. The X-Series prevents the thief from starting the vehicle as a unique PIN code is required before a vehicle can be started or put into gear.

PERSONAL SECURITY

The X-Series uses a combination of buttons and switches in your vehicle to enable/disable the immobiliser. You can choose any combination of buttons, making it unique to yourself and your vehicle, and more difficult for thieves to drive away with it.

HIGH LEVEL PROTECTION

There is no need to remember to activate the system once you have completed your journey, because once the vehicle's ignition has been turned off the system will automatically activate and start protecting your vehicle.

X-Series is built with tracker compatible capabilities, meaning you can pair it with your ScorpionTrack S5 tracker to create a layered approach to your vehicle security.

The ScorpionTrack stolen vehicle tracker uses advanced technology along with movement detection sensors hidden within the vehicle, so you can relax knowing that your pride and joy is protected against sudden attack and potential theft.
